code
 resource "aws_vpc" {

↳

Python

package ??

* os , subprocess *

command line

(sys.argv)

import os

import sys

package Python

multiple objects

Syntax
reference

"auto_kk2"

"myret"

myret, auto_kk2

6

import datetime

mytime₁ = datetime
mytime₂ = datetime

mytime₁. date

mytime₂. datetime

keypair

iteration
code execution

3rd

variables

Python

①

var = 10

↓

print (var)

↓

define

Variable

"my var name" {

description = " "

default = value

}

Syntax:-

↓

→ "{ var = my var name }" [0, 1, 3]

diff ways of using variables

7/12

① default.

② don't give default then it will prompt

③ -var varname = value

④ -var-file = file.txt vars

$a=10, b=20$

print: $a+b \Rightarrow 30$

output

output: "output displayname" {

value = ??

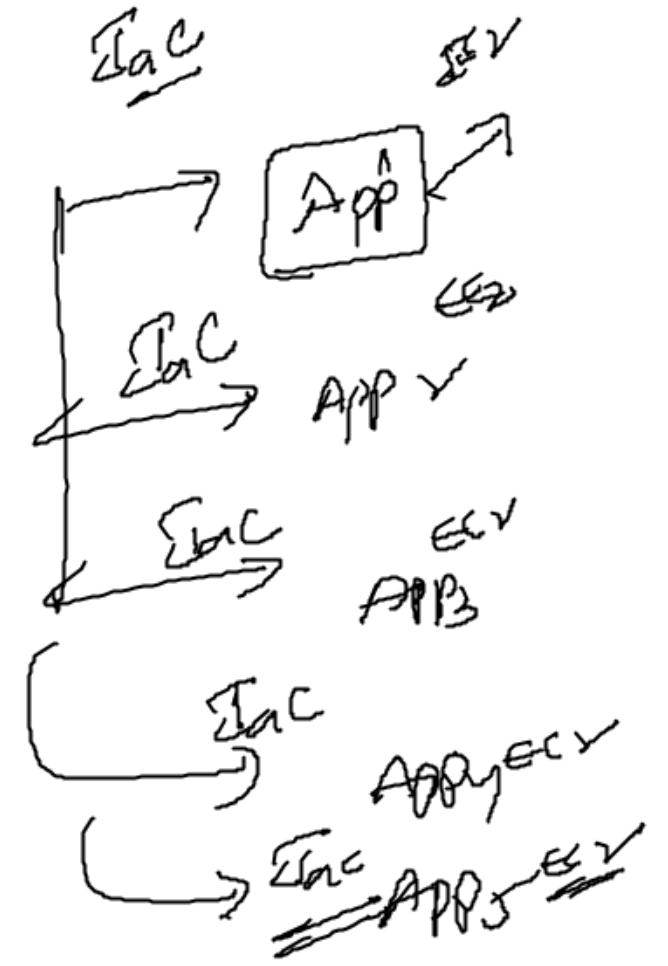

}

code reusability
